

Indian Ecological Society: International Conference 2016

Natural Resource Management: Ecological Perspectives

18-20 February 2016

Sher-e-Kashmir University of Agricultural Sciences & Technology of Jammu, India

About the Conference

Natural resource management issues are inherently complex as they involve the ecological cycles, hydrological cycles, climate, animals, plants and geography etc. All these are dynamic and interrelated. In addition to the natural systems, natural resource management also has to manage various stakeholders and their interests, policies, politics, geographical boundaries, economic implications and so on. Most nations subscribed to new principles for the integrated management of land, water and forests in the United Nations Conference for the Environment and Development (UNCED) held in Rio de Janeiro in 1992. Developing location specific, cost effective, eco-friendly conservation and management technologies for higher input use efficiency, agricultural productivity & profitability without deteriorating natural resource base is vital for sustainable management of natural resources to ensure agricultural development. In view of these facts the Indian Ecological Society and Sher-eKashmir University of Agricultural Sciences and Technology (SKUAST) of Jammu is organizing three days' conference on "Natural Resource Management: Ecological Perspectives" from 18-20 February, 2016 at SKUAST of Jammu, Main Campus Chatha, Jammu, Jammu & Kashmir, India.
