

The 4th Forest Science Forum-International Conference on Forest Multi- functional Management, will take place at Nanjing, Jiangsu province of China from 20 – 21 May 2016. This conference series was founded in 2010 in Beijing, and taken place once around China every two years.

Forest is the main body of terrestrial ecosystem, with providing forest products, slowing climate change, preserving soil and water, and other functions. With the rapid development of economy, the sharp growth of population, and the continuous improvement of people's living standards, people begin to pay more attention to the ecological functions of the forest.

In order to promote international exchanges and cooperation of forest multifunctional management, show the latest scientific research achievements, discuss the development trend, Chinese Society of Forestry will hold a joint symposium bringing together the 4rd Forest Science Forum—the Symposium of Forest Multi-functional Management from May 20th to 21th in Nanjing. The symposium invites the experts worldwide.

Information on conference themes, topics and key deadlines can be found at:
